Hiring Team
Company Name

Application for Software Engineering / Full Stack Development Roles

Dear Hiring Team,

I am a B.Tech graduate in Artificial Intelligence and Data Science with practical experience in Full Stack Development, Backend Engineering, and AI-powered application development. I am applying for Software Engineering, Backend Development, Full Stack Development, and AI/ML-related opportunities within your organization.

My technical experience includes building scalable web applications, RESTful APIs, workflow automation systems, authentication architectures, and intelligent software solutions using technologies including Node.js, Express.js, React.js, Python, Flask, MongoDB, MySQL, JavaScript, and Java. Through internships and project-based engineering work, I gained hands-on exposure to debugging, SDLC workflows, database design, API integration, deployment pipelines, and performance optimization.

I have independently designed and developed multiple production-oriented projects including a MERN Stack Resume Builder Platform, Intelligent Chatbot System, Smart Leave Management Platform, Career Recommendation System, and AI-driven automation applications. These projects strengthened my understanding of backend systems, JWT authentication, role-based access control, responsive frontend architecture, cloud deployment workflows, and scalable application design.

Beyond development, I focus strongly on engineering presentation, system organization, and professional software delivery. I also built and deployed a modern developer portfolio platform showcasing technical projects, engineering workflows, and full-stack development capabilities with an emphasis on clean UI systems and performance-focused architecture.

I am particularly interested in opportunities where I can contribute to backend engineering, scalable web systems, enterprise applications, intelligent automation, and AI-integrated software solutions while continuously improving as a software engineer in collaborative development environments.

I have attached my resume for your consideration. Thank you for your time and evaluation. I would welcome the opportunity to further discuss how my technical skills, engineering mindset, and project experience align with your team's requirements.

Sincerely,

Siva Satya Sai Bhagavan Gopalajosyula
